

Recipe Website UI Style Guide

FRONT-END IMPLEMENTATION SPECIFICATIONS

This design system document establishes the design tokens, visual hierarchy, and interface rules for our culinary platform. It pairs an organic warm sage secondary color with a soft cream primary base, highlighted by an appetizing ochre accent token.

1. The Core Color Tokens

Use these precise hex values for all layout layers, interactive element declarations, and status components.

		
Primary Base (Light) Hex: #FAF6F0 Role: Sitewide background, canvas layers, white-space padding.	Secondary (Sage) Hex: #B4B56B Role: Sub-branding, categorizations, tag lines, active UI text links.	Tertiary (Ochre Accent) Hex: #D4A373 Role: Primary CTAs, key interactive markers, conversions.

2. Typography Systems

We combine a structural sans-serif font for readability and data metrics with an elegant serif typeface for title entries and food editorial copy.

HEADINGS (H1, H2, H4) & ARTICLE COPY

Font Family: 'Georgia', 'Times New Roman', serif

- **Body Text:** Color #2E2A25 (Deep Charcoal/Espresso) for a softer, organic contrast on the light base. Avoid pure black (#000000).
- **Section Titles (H2):** Left accent border utilizing the Secondary Sage token (#B4B56B).

NAVIGATION, UI META, & FORM CONTROLS

Font Family: 'Helvetica Neue', Helvetica, Arial, sans-serif

- Used exclusively for cooking times, ingredient metrics, recipe tags, filter categories, and buttons.

3. CSS variables & Global Tokens

Please implement these standard custom properties within your global stylesheet layout structure:

```
:root {  
  /* Color System */  
  --color-primary-base: #FAF6F0;  
  --color-secondary-sage: #B4B56B;  
  --color-tertiary-ochre: #D4A373;  
  --color-text-main: #2E2A25;  
  --color-text-muted: #7A7265;  
  --color-surface-white: #FFFFFF;  
  --color-surface-card-border: #E6DFD5;  
  
  /* Global UI Settings */  
  --border-radius-pill: 20px;  
  --border-radius-smooth: 6px;  
  --transition-smooth: all 0.25s ease-in-out;  
}
```

4. Element Implementation Specifications

The table below provides clear implementation rules for building interactive and static elements across the site recipe nodes.

Component Type	Styling & Behavior Strategy	Visual Asset Mockup
Primary Call-to-Action (CTA)	Used for high-value user triggers such as "Print Recipe", "Save to Recipe Box", or newsletter forms. - Background: <code>--color-tertiary-ochre</code> - Text: <code>#FFFFFF</code> (Bold, Caps) - Hover state transitions to a 10% deeper variant tint.	
Recipe Tags / Categories	Used for categories like "Gluten-Free", "30-Minute Meals", or seasonal tags. - Background: <code>--color-secondary-sage</code> - Text: <code>#FFFFFF</code>, compact paddings.	
Recipe Grid Card Layout	Cards housing recipe titles must feature a crisp surface background to lift off the soft base layer canvas. - Background: <code>--color-surface-white</code> - Border: 1px solid <code>--color-surface-card-border</code>	

5. Key Developer Instructions for Layout Rules

Rule A: Canvas Contrast Rules

The entire body viewport background must inherit `--color-primary-base` (`#FAF6F0`). Do not use standard white containers inside this space unless creating grid cards or content containers that need to clearly pop.

Rule B: Softening Text Contrast

Avoid hard black structural outlines or dark gray fonts. Use `#2E2A25` for primary recipe narrative copy, and `#7A7265` for descriptive informational text snippets (e.g., publishing dates, calorie notations).

Rule C: Focus States and Interaction Clues

Active form inputs, text selection indicators, and hover markers for content blocks should dynamically tap into the secondary warm sage (`#B4B56B`) or use soft underlying background shading to guide navigation naturally.
